SELECTION GUIDE

This page describes some of the questions to be considered when selecting spray nozzles. In addition, answers for uncomplicated situations are provided where possible. In some applications, because of the large number of variables involved, accurate answers are not always possible except through actual testing or simulation. Our technical staff, however, may be able to lend assistance in their areas of expertise. Please feel free to give us a call.

WHAT SPRAY NOZZLE CONSTRUCTION DO I REQUIRE?

The basic elements of spray nozzle construction are pipe connection, physical dimensions, and material of construction.

PIPE CONNECTION is described by type, size, male, female, or flange. Nozzles described in this catalog have BSPT threaded pipe connections (NPT are also available for most models).
SIZE - Standard sizes from 1/8 BSPT to 4" BSPT, or as indicated.
MALE AND FEMALE connections are available where indicated.

PHYSICAL DIMENSIONS are listed throughout this catalog. They are set at our factory and we recommend that you do not alter any spray nozzle dimensions, as this could affect spray nozzle performance.

MATERIAL OF CONSTRUCTION

Standard materials are available as noted in this catalog. In addition, many models are available in special materials. Our technical staff will be pleased to discuss your special material requirements with you. BEX nozzles have been produced in the following materials:

WHAT SPRAY CHARACTERISTICS DO I REQUIRE?

A spray may be characterized by describing its spray pattern, flow rate, atomization and spray angle. This catalog describes these characteristics for the listed nozzles, for spraying water under controlled conditions.

SPRAY PATTERN: Common spray patterns (flat, full cone, hollow cone) are all described in this catalog. The spray pattern of a nozzle will generally travel further under higher fluid pressures. However, fine mist-like sprays are very susceptible to air movement, and may be carried away by such movement of air.

FLOW RATE: The low rates listed in this catalog are for water in U.S. litres per minute, unless otherwise indicated. “--” in the capacity table means “not recommended at this pressure.”

ATOMIZATION: Atomization is primarily dependent on pressure and viscosity, and varies from point to point within a spray pattern. A range of particle sizes is produced, with some average value which varies according to conditions. For this reason, spray droplet sizes are not listed in this catalog. If you require spray droplet information for critical applications, BEX will be pleased to provide you with measurements, using our in-house laser doppler anemometry equipment.

SPRAY ANGLES: The spray angles listed in this catalog are for water spray under controlled conditions. Under low pressure, the sides of the spray may curve in due to the acceleration of gravity. Spray angles may also be reduced due to the tendency of spray patterns to interfere with themselves or with spray patterns from adjacent nozzles. Table 1 on page 3 lists theoretical spray coverage for a variety of spray angles at various distances from the nozzle.

WHAT FACTORS WILL AFFECT MY SPRAY CHARACTERISTICS?

When the conditions controlling spray nozzle performance change, the spray characteristics may change. This section lists conditions which may vary, and how those conditions may affect the spray characteristics.

PRESSURE: The flow rate of a liquid is proportional to the square root of the pressure difference between the pressure liquid and external (usually atmospheric) conditions, thus

$$\frac{\text{Flow A}}{\text{Flow B}} = \sqrt{\frac{\text{Pressure A}}{\text{Pressure B}}}$$

higher pressure generally results in finer spray atomization, greater spray impact, and greater spraying distance.

VISCOSITY: Spraying liquids with higher viscosity than water generally results in reduced atomization, and impact. Spray angle will usually decrease.

SPECIFIC GRAVITY: Flow rates shown in this catalog are for water. (The specific gravity of water is 1.0). For liquids with a different specific gravity, flow is given by the formula:

$$\text{Flow} = \text{Water Flow} \times \frac{1}{\sqrt{\text{Spec. gravity}}}$$

SURFACE TENSION: An increase in surface tension generally results in an increase in spray droplet size, and a reduction in spray angle.

IMPACT

Spray impingement, or "spray impact" as it's otherwise known, can be calculated using several different methods. The most widely used value with regards to nozzle performance is "impact per square inch." However, it's dependent on spray pattern and spray angle. In order to calculate the impact per square inch for a given nozzle, you must first determine the theoretical total impact using the formula below:

$$1.9 \times (\text{spraying pressure, psi})$$

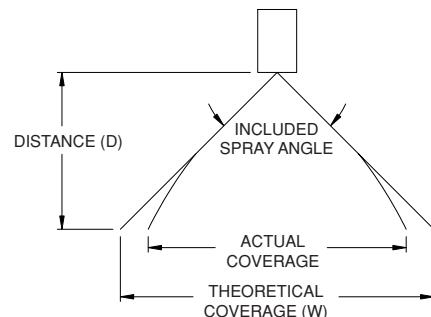

Next, using the chart to the right, find the relevant percent per square inch of the theoretical total impact and multiply this by the theoretical total. The result of this equation is the spray impact in pounds per square inch. The greatest impact in pounds per square inch is attained by solid stream nozzles and can be calculated using the formula:

Theoretical Total Impact Spraying Water (kg-force) =

$$.0421 \times (\text{L/min at spraying pressure}) \times \sqrt{\text{spraying pressure, bar}}$$

Spray coverages shown in Table 1 are based on straight sided spray patterns. At low pressures the sides may curve in, as shown below, because of the acceleration due to gravity.

To find the width of a spray (W) at any distance (D), multiply the W/D ratio by the distance.

THREADED NOZZLES

F SERIES

Flat "V" spray nozzles

FLAT SPRAY

SPRAY CHARACTERISTICS:

F-Series spray nozzles produce a flat, fan-shaped spray pattern, with spray angles available from 5° to 110° measured at 40 psi. Spray angles generally increase with pressure, as shown in the capacity table.

Spray density tapers off toward the outside of these sprays, to permit overlapping of spray patterns while maintaining uniform spray density.

See page 13 for 0° solid stream spray nozzles.

CONSTRUCTION:

The models listed are machined from bar stock and are one piece construction. Standard materials are brass, mild steel, 303 stainless steel and 316 stainless steel. Some models are also stocked in Carpenter 20°, PVC, CPVC and polypropylene. All models are available in either BSPT or BSPT threads.

For molded plastic models, please see page 20.

TYPICAL APPLICATIONS:

Suitable for a variety of washing and spraying applications.

- Parts Cleaning
- Metal Washing
- Foam Control
- Asphalt Spraying
- Gravel Washing
- Vehicle Washing
- Fertilizer Spraying
- Dishwashers

STF SERIES

Flat "V" spray nozzles

FLAT SPRAY

SPRAY CHARACTERISTICS:

STF spray nozzles produce a flat, fan-shaped spray pattern, similar to the F Series. Spray angles are available for a 0° solid stream to 90°, measured at 3 bar. Spray angles generally increase with pressure, as shown in the capacity table below.

Spray density tapers off toward the outside edges of these sprays, to permit overlapping of spray patterns while maintaining uniform spray density.

CONSTRUCTION:

The STF are disc-shaped, with a male 5/8-18 straight thread. They are machined from bar stock, and are one piece construction. Standard materials are 303 stainless steel and 316 stainless steel. Some models are also available in other materials.

TYPICAL APPLICATIONS:

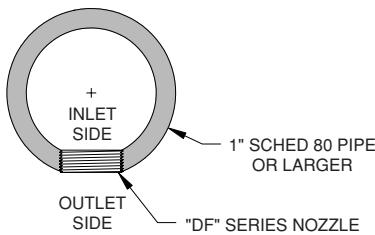

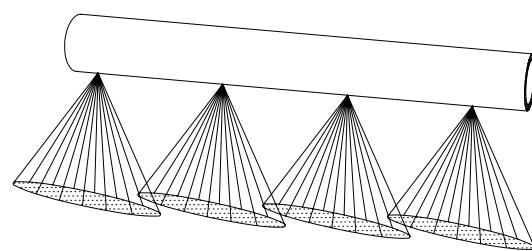

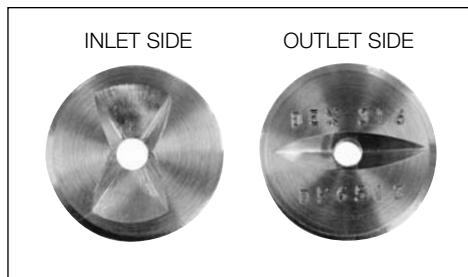

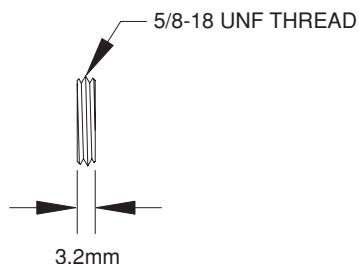

The STF series is designed for applications where space is at a minimum, or where the nozzles must not protrude from the header. Typically the outer surface of the nozzle is flush with the outside of the header.

(NOTE: Certain models will protrude slightly).

F SERIES

Molded plastic spray nozzles

FLAT SPRAY

SPRAY CHARACTERISTICS:

BEX F series spray nozzles produce a flat spray pattern with spray angles of 0° to 110° @ 3 bar.

CONSTRUCTION:

Each BEX molded nozzle is designed with a series of "knobs" which makes them easier to finger tighten than a hex, especially when wet. The design feature of a small starter barrel greatly reduces the tendency to strip or cross-thread the nozzle during the installation.

MATERIALS AVAILABLE:

ACETAL - (Yellow) suitable for most aqueous solutions (ph 4-9) up to 80°C.

POLYPROPYLENE - (Green) excellent chemical and corrosion resistance. Useful up to 80°C.

NATURAL POLYPROPYLENE - non-pigmented for optimum purity.

PVDF - (Red) excellent durability and abrasion resistance and is inert to most chemicals. Many applications useful up to 150°C.

NATURAL PVDF - non-pigmented for optimum purity.

Narrow angle full cone spray nozzles

GS30, S30

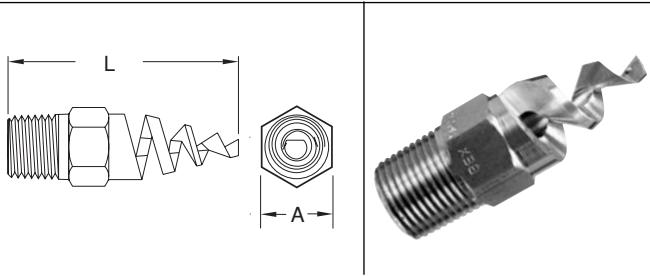

With a narrow spray angle and a larger droplet size, BEX 30 degree full cone nozzles have more impact per unit area than the wider angle full cone sprays. Standard connections are BSPT threads. BSPT

threads are also available. GS and FGS styles may be disassembled for cleaning. Stock materials are brass, 303 stainless steel and 316 stainless steel.

SPRAY CHARACTERISTICS:
The HNS series vaneless full-cone nozzle projects a medium to coarse full-cone spray in a direction perpendicular to the nozzle inlet axis. The maximum free passage in this nozzle is substantially larger than most full-cone nozzles due to the 'vaneless' design. This nozzle is suitable for applications where a relatively coarse full-cone spray is required, and where standard nozzles are subject to plugging.

CONSTRUCTION:

The HNS series are made from bar stock and are a two piece construction. Standard materials are brass, 303 stainless steel and 316 stainless steel. Other materials are available upon request.

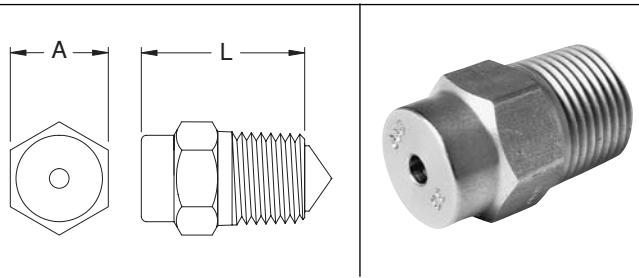

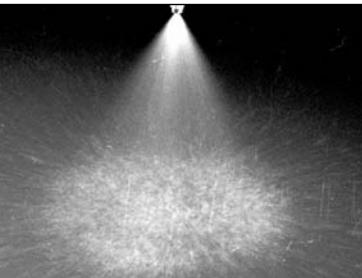

SPECIAL FEATURES:

- 'Vaneless' full-cone design
- Large maximum free passage
- Easy disassembly/assembly and cleaning

TYPICAL APPLICATIONS:

Wherever a medium to coarse full-cone spray is required from a nozzle with a larger maximum free passage.

**SPRAY CHARACTERISTICS:**

Full cone spray pattern with a distribution that is heavier in the middle. Spray angle remains nearly constant at pressures between 1.5 and 5 bar.

CONSTRUCTION:

CCS nozzles are machined from bar, and consist of a one piece body, plus a non-removable insert. Standard material is brass.

TYPICAL APPLICATIONS:

Suitable for temperature control applications, where the volume of sprayed coolant can be adjusted without significantly affecting spray coverage. This enables the user to maximize heat transfer efficiency while avoiding loss of coverage area. CCS nozzles feature an internal insert which will not come loose in environments which are subject to thermal cycling.

- Continuous Casting and Billet Casting
- Rinsing and Cooling
- Heat Exchanger Cooling
- Chemical Processing

SPRAY CHARACTERISTICS:

These models produce a full cone spray pattern with spray angles of 60° to 120° @ 0.7 bar.

PVDF - excellent durability and abrasion resistance and is inert to most chemicals. Many applications useful up to 150°C.

CONSTRUCTION:

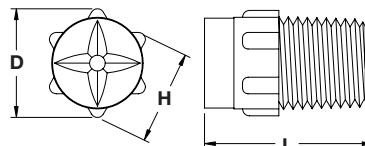

Each BEX molded nozzle is designed with a series of "knobs" which makes them easier to finger tighten than a hex, especially when wet. The design feature of a small starter barrel greatly reduces the tendency to strip or cross-thread the nozzle during installation.

FULL CONE SPRAY

Plastic wide angle full square spray nozzles

SPRAY CHARACTERISTICS:

A full square spray pattern with large flow capacities. Similar to the PSQ series above, except with a wider spray angle of 120° (included angle). Other sizes and spray angles available upon request.

insert. Standard materials are PVC, CPVC and polypropylene.

DIMENSIONS:

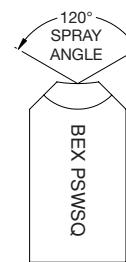

Same as PSQ series (above).

TYPICAL APPLICATIONS:

Same as PSQ series, but where a wider spray coverage is required.

CONSTRUCTION:

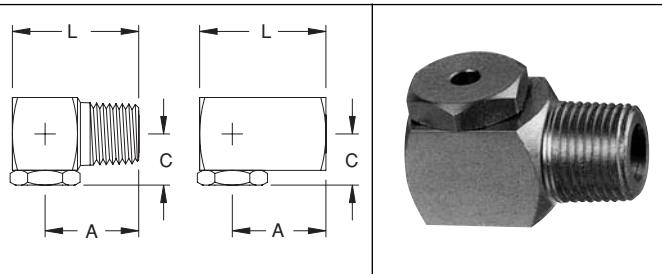

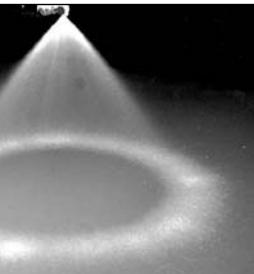

The models listed are machined from plastic and consist of a body plus a non-removable

SAME CAPACITIES AS PSQ SERIES (above). ADD "WSQ" AT THE END OF THE MODEL NUMBER FOR WIDE ANGLE WHEN ORDERING (IE: 2FPS40WSQ).

H SERIES

Hollow cone spray nozzles

SPRAY CHARACTERISTICS:

A hollow cone spray pattern, emerging at right angles to the centerline of the pipe connection. The standard included angle of the spray cone is 70° at 0.7 bar. At low pressures hollow cone nozzles produce medium size, uniform droplets. At higher pressures finer droplets are produced.

CONSTRUCTION:

The models listed are machined from bar stock, and are two piece construction. Standard materials are brass, 303 stainless steel and 316 stainless steel. Some models available in other materials.

In-line hollow cone spray nozzles

ILH SERIES

DIMENSIONS

1/2ILH	33	38	25
3/4ILH	38	46	31

SPRAY CHARACTERISTICS:

ILH series in-line hollow-cone spray nozzles produce a very evenly distributed hollow-cone spray which emerges through the center axis of the nozzle body. At lower pressures, they produce medium sized, uniform droplets.

Finer droplets are produced at higher pressures.

CONSTRUCTION:

ILH series nozzles have large maximum free passage diameters to reduce clogging.

Interchangeable nozzle caps are easily removed for cleaning or inspection. Standard materials of construction for ILH series nozzles are brass, 303 and 316 stainless steel. Other body and cap materials are available upon request.

QUICK DISCONNECT NOZZLES

Quick-disconnect spray nozzles

BEX ZIP-TIP® quick-disconnect spray nozzles are designed to allow fast and easy installation and removal of spray nozzle tips and adapter fittings, while providing positive alignment between nozzle body and nozzle tip. No tools are required to install or remove ZIP-TIP nozzle tips or adapters. Installation involves simply inserting a ZIP-TIP nozzle tip into a ZIP-TIP nozzle body, pressing lightly, and twisting in a clockwise direction until the nozzle tip or adapter snaps into aligned position. ZIP-TIP nozzles utilize standard

"O-ring" seals, where the "O-rings" are located on, and removed with, the nozzle tip. These seals are supplied with each new spray nozzle tip or adapter fitting. Any "Z" series (e.g. "ZF"), ZIP-TIP nozzle tip or adapter will fit any "Z" series ZIP-TIP nozzle body. Likewise, the "ZL" series (e.g. "ZLF"), ZIP-TIP nozzle tip or adapter for larger capacities will fit any "ZL" series ZIP-TIP nozzle body (note that a minimum pipe size is required for specific capacities). ZIP-TIP nozzles are available in 303 and 316 stainless steel as

well as brass, and all are supplied with VITON® seals standard. Other nozzle tip, nozzle body, and seal materials are available upon request. A wide range of styles and capacities of ZIP-TIP nozzle tips and nozzle bodies for flat, full-cone, and hollow-cone spray patterns are available. ZIP-TIP spray nozzles are rated to 20 bar. (NOTE: Metal and molded plastic ZIP-TIP components are not interchangeable).

U.S. Patent No. 5,421,522

ZIP-TIP NOZZLE INSTALLATION & REMOVAL

- NO TOOLS REQUIRED for ZIP-TIP nozzle tip installation or removal
- POSITIVE ALIGNMENT of spray pattern
- "Light-lock" feature allows for easy removal
- Seals located on and removed with nozzle tip for easy flushing
- New seals supplied with each new nozzle tip (VITON® standard)
- Uses standard "O-RING" seals, available in a variety of materials

SPRAY CHARACTERISTICS:

ZF-Series spray nozzles produce a flat, fan-shaped spray pattern with spray angles available from 15° to 110° measured at 3 bar. Spray angles generally increase with pressure, as shown in the capacity table.

Spray density tapers off toward the outside of these sprays, to permit overlapping of spray patterns while maintaining uniform spray density.

CONSTRUCTION:

The tip models listed are machined from bar stock and are one piece construction. Standard materials are brass, 303 stainless steel and 316 stainless steel. All bodies are available in either BSPT or NPT threads. Please see page 40 for body styles and adapters. Please see page 55 for molded plastic models.

TYPICAL APPLICATIONS:

- Suitable for a variety of washing and spraying applications.
- Parts Cleaning
- Metal Washing
- Foam Control
- Asphalt Spraying
- Gravel Washing
- Vehicle Washing
- Fertilizer Spraying
- Dishwashers

Flat "V" spray nozzles

ZF SERIES

SPRAY CHARACTERISTICS:

ZF-Series spray nozzles produce a flat, fan-shaped spray pattern with spray angles available from 15° to 110° measured at 3 bar. Spray angles generally increase with pressure, as shown in the capacity table.

Spray density tapers off toward the outside of these sprays, to permit overlapping of spray patterns while maintaining uniform spray density.

CONSTRUCTION:

Molded plastic spray nozzles are available in glass reinforced polypropylene or PVDF (Kynar®).

COLOR CODING:

Zip-Tip flat "V" spray tips are color-coded for easy identification.

TYPICAL APPLICATIONS:

- Parts Cleaning
- Metal Washing
- Foam Control
- Asphalt Spraying
- Gravel Washing
- Vehicle Washing
- Fertilizer Spraying
- Dishwashers

Additional sizes may be available upon request. Please contact your BEX distributor.

Clip-on spray nozzles

DIMENSIONS

PIPE SIZE	Dim. A	Dim. B
1"	45 mm	73 mm
1 1/4"	51 mm	77 mm
1 1/2"	54 mm	80 mm
2"	61 mm	89 mm

SPRAY CHARACTERISTICS:

These nozzles simply clip over a pre-drilled pipe (15mm dia. hole) and are available with a variety of spray balls, in various spray patterns, flow rates and spray angles.

CONSTRUCTION:

Made of corrosion-resistant plastic and stainless steel. Heavy-duty spring clip good to 6 bar at 80°C. A 316SS clip is also available, if required.

TYPICAL APPLICATIONS:

- Parts Cleaning
- Pretreatment
- Spray Washing & Rinsing

Double clip model also available.

THE BEX "FINGER" SYSTEM

The BEX spring clamp is the heaviest and most durable used in the industry. It provides long service at pressures up to 7 bar. Also available with a second clip.

Standard O-Ring seal is EPDM. Buna-N, Viton®, and special "retrofit" seals are available.

Square fitting glass filled polypropylene bodies are available in four pipe sizes and are good up to 80°C.

Hundreds of standard nozzle balls and spray options are available when using our threaded ball, below, or the Zip-Tip® nozzle adapter (see page 54).

BEX unique "Finger" system holds the ball securely in alignment to prevent movement when the cap is tightened. The "Finger" system is optional on all BEX B-Ball® adjustable nozzles.

The K-Ball® cap has strong butress threads and is made from glass filled polypropylene or PVDF.

HOW TO ORDER COMPLETE K-BALL ASSEMBLIES

Use the correct body part number (from the parts listed in **BOLD** at the right), followed by the model number for the nozzle ball (see pages 59 and 60).

Example:

BF5070 nozzle balls are needed to fit onto a 1-1/4" pipe. Accurate alignment of the nozzles is critical, so the 1-1/4" body with "fingers" will be used. The correct PART number for this K-Ball nozzle assembly is 1.2KFBF5070.

SPRAY BALL: CHOOSE FROM THE TABLES ON PAGES 59 AND 60.

BF FLAT-V SPRAY NOZZLE BALLS (for 1", 1-1/4", 1-1/2" and 2" pipe)**SPRAY CHARACTERISTICS:**

Spray is fan-shaped with spray angles of 15° to 110°. Spray density tapers off toward the outside to permit overlapping of the spray patterns while maintaining uniform spray density.

COLOR CODING:

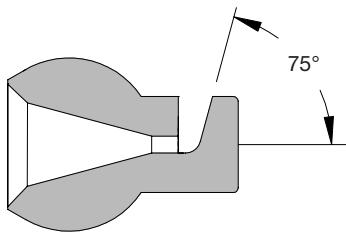

The more popular models of the flat-V spray nozzle balls are color coded by flowrate for easier identification.

BFL FLOODING SPRAY NOZZLE BALLS

(for 1", 1-1/4", 1-1/2" and 2" pipe)

SPRAY CHARACTERISTICS:

A wide, flat shaped spray with low impact. The spray is deflected 75° from the centerline of the nozzle, as shown.

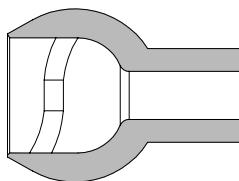

TYPICAL APPLICATIONS:

Flooding nozzles are often used at the beginning and end of phosphate stages, to prevent mist carry over. They can also be used for "wetting" surfaces during long drain stages.

BPH HOLLOW CONE PHOSPHATING NOZZLE BALLS

(for 1", 1-1/4", 1-1/2" and 2" pipe)

SPRAY CHARACTERISTICS:

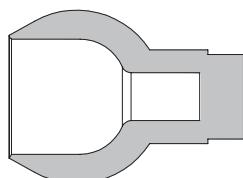

A hollow cone pattern with low impact. BPH nozzle balls are made of glass reinforced polypropylene. Available in three models.

TYPICAL APPLICATIONS:

Designed specifically for phosphate stages. This large droplet, low impact spray results in tighter and more consistent phosphate crystalline structure. It minimizes the misting of phosphate spray, thus reducing 'pre-coating', streaking, and carry over to adjacent stages.

THREADED BALLS (for K-Ball nozzle assemblies)

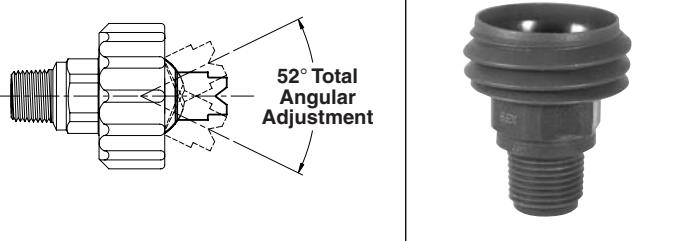

Ball has a hexagonal interior for easy holding

TYPICAL APPLICATIONS:

Expand your range of nozzle choices by using threaded balls. Threaded balls are made of glass reinforced polypropylene, with 1/8", 1/4 and 1/2 BSPT female threads. (NPT also available)

MODEL	DESCRIPTION
1B	1/8 BSPT Female thread
2B	1/4 BSPT Female thread
3B	3/8 BSPT Female thread
5B	1/2 BSPT Female thread

Please note: The 5B has an angular adjustment of only 34°.

The BEX threaded K-Ball® body provides the ability to adjust the direction of the spray pattern by simply twisting the K-Ball® cap, repositioning the nozzle and tightening the cap. The same 52° nozzle angle of adjustability exists in the threaded body as in the K-Ball® clip-on

body. This plastic threaded body is useful when a metal clip is undesirable or where space limitations prevent using a spring clip-on nozzle.

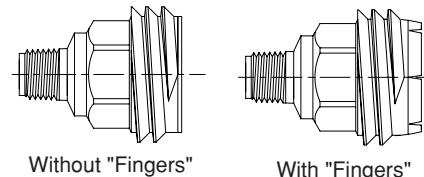

ORDERING ASSEMBLIES:

You can easily order complete threaded K-Ball® ball assemblies using the ball model numbers listed on page 59. Example B3/8KFBD5070. ('B3/8' denotes 3/8 BSPT thread).

CONSTRUCTION:

Standard materials are cast iron, 316 SS, PVDF (Kynar®) and glass-filled polypropylene. Other materials are available upon request.

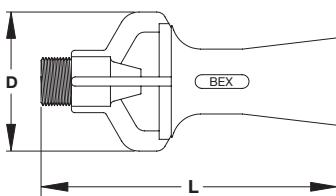

TYPICAL APPLICATIONS:

- Plating Tanks
- Cleaning Tanks
- Phosphating Tanks
- E-coat Tanks
- Fertilizer Tanks
- Pulp Tanks
- Sludge Tanks
- Paint Booths
- Anodizing Tanks
- Cooling Towers
- Decorative Fountains

SELECTING THE RIGHT EDUCTOR:

(1) Calculate the required steam flow rate from the following equation:

$$\text{Steam Required (kg/hr)} = \frac{\text{Temp. increase of water } (^{\circ}\text{C}) \times \text{weight of water (kg)}}{\text{Time allowed to heat tank (hrs.)} \times 556}$$

(2) Knowing the steam flow rate and the steam pressure available at the sparger, choose the sparger(s) from the table below. Using several small spargers may be advisable to using one large sparger.

(3) To help eliminate steam hammer, ensure that the minimum absolute pressure of the eductor is at least twice the absolute pressure inside the tank, at eductor depth.

Note:

1 litre of water = 1 kg

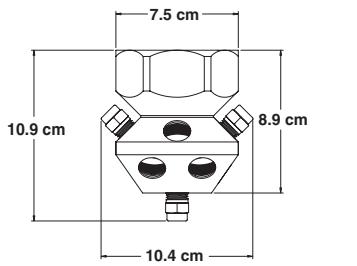

1 cubic metre of water = 1000 kg

Tank washing assembly

TYPICAL APPLICATIONS:

This assembly is suitable for a variety of tank washing applications where the maximum tank diameter is no greater than approximately 3 m. The assembly will pass through a tank opening of at least 10.5 cm in diameter.

SPRAY CHARACTERISTICS:

This unit provides a fixed, non-rotating spray pattern. The assembly body has 13 individual female BSPT nozzle connections which are designed to accept full cone nozzles. For best results, select 'S' series full cone spray nozzles from page 21. A wide variety of flow rates are available. A few standard combinations are listed in the table below.

CONSTRUCTION:

The assembly is available in brass, 303 and 316 stainless steel. A 1 1/2" female BSPT connection attaches to the supply line. Maximum recommended operating pressure is 4 bar.

M7S SERIES

Cluster nozzle assembly

PRODUCT DESCRIPTION:

The M7S series cluster nozzle uses an array of seven (7) GS style full-cone spray nozzle caps mounted on a cluster nozzle body to produce a full-cone spray. Multiple full-cone spray nozzle caps produce a relatively small droplet size for large flow rates and are less susceptible to clogging. Nozzle caps are easily removed for cleaning or nozzle change-out.

CONSTRUCTION:

Standard cluster nozzle body and cap materials are brass, 303 stainless steel and 316 stainless steel. Other body and cap materials are available upon request.

Self-aligning disc shower nozzles

WF SERIES

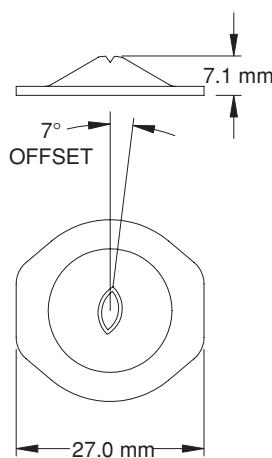

TYPICAL APPLICATIONS:

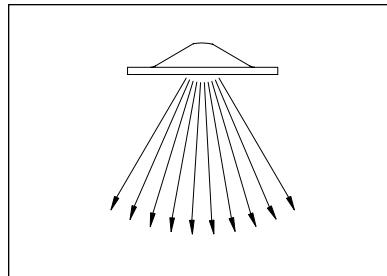

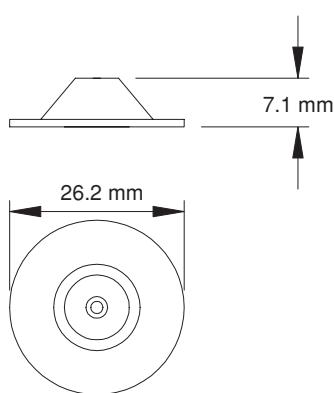

WF Series shower nozzles are designed to work in a number of commercially available "shower" bar systems where a self-aligning replaceable nozzle disc is required.

The back protruding design permits the nozzle orifice to be cleaned from inside the header, using a rotating brush.

WF FLAT STREAM NOZZLE

WF SOLID STREAM NOZZLE

SPRAY CHARACTERISTICS:

Available in 30° and 60° flat V-shaped spray patterns, as well as zero (0) degree solid stream spray.

All flat V-shaped spray models are pre-aligned to a standard 7° offset angle to allow for spray overlap without interference from the adjacent nozzles. (Refer to drawings shown below).

CONSTRUCTION:

Standard material of construction for the spray disc is 317L stainless steel. A gasket is available for sealing the face between the nozzle disc and the body.

MAJ SERIES

Machined adjustable joints

TYPICAL APPLICATIONS:

The MAJ series of adjustable joints allow spray nozzles or other threaded items to be rotated and tilted to obtain the desired spray pattern or orientation, without having to disturb the surrounding piping. They may also be used within piping systems as an adjustable union type connection.

CONSTRUCTION:

The unit consists of a male inlet section and a female outlet section, held together by a threaded cap. The cap may be loosened to change the angle of adjustment between the inlet and outlet sections. Maximum recommended operating pressure is 20 bar. Standard materials are brass, 303 stainless steel, and 316 stainless steel.

AJ SERIES

Flanged adjustable joints

TYPICAL APPLICATIONS:

To rotate and tilt spray nozzles, to obtain a desired positioning of a spray pattern, without having to disturb surrounding piping. May also be used within piping systems as an adjustable union type connection. Maximum recommended operating pressure is 8 bar.

Inlet of ball is hexagonal for easy holding

CONSTRUCTION:

The unit consists of a male inlet section and a female outlet section, held together by a flange assembly. Locking screws may be loosened to change the angle of adjustment between the inlet and outlet sections. Standard materials are brass and 303 or 316 stainless steel with 304 stainless steel flanges.
